Address \_\_\_\_\_ (location of installed water heater)

### **High Efficient Electric Water Heating- Electric Thermal Storage (ETS)**

Arrowhead Electric Cooperative is pleased to offer rebates on the installation of a high efficient electric water heater. Electric Thermal Storage (ETS) uses off-peak electricity to "charge" water heaters to meet members' hot water needs over the 'on-peak' period while the electric supply is interrupted. **To qualify:** water heaters must have an energy factor of .90 or higher, a capacity of 80 gallons or more, and be controlled on one of our EnergyWise Programs.

- \$200 - Available to members replacing a non-controlled electric water heater.
- \$100 - Available to members in new construction.

### **Heat Pump Water Heaters**

Electric heat pump water heaters are more efficient than conventional water heaters because rather than generating all their own heat, they use the ambient air to heat the water. These units are not required to be on any control program to receive this rebate. **To qualify:** they must be ENERGY STAR® rated and have an energy factor of 2.0 or higher.

- \$200 - Available to members replacing a non-controlled electric water heater.
- \$100 - Available to members in new construction.

Please include proof of energy factor rating along with a copy of the receipt providing the date of purchase. Member must have the water heater or heat pump water heater installation completed by December 31, 2011.

I have installed this water heater or heat pump water heater at the above address and AECI serves it as a Residential or Seasonal electric account. The Cooperative may inspect this installation at all reasonable hours.
